Return by Reference

- A function cal return reference
- It should not return reference of its local variables
- It can return formal parameters if they are reference

```
Int & fun(int &a)
{
        cout<<a;
        return a;
}
Int main()
{
        int x=10;
        fun(x)=25;
        cout<<x;
}
```
